                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             178 PLMFGSLTVEKLKTLVNPANVTFKTYEGMMHSSCQQEMMDVKQFIDKLLPPI 229
similarity). Has lysophospholipase activity (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (Probable).
-!- SIMILARITY: Belongs to the AB hydrolase 2 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              29-MAR-2004 (Rel. 43, Created)

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).

-!- FUNCTION: May hydrolyze fatty acids from S-acylated cysteine
residues in proteins such as trimeric G alpha proteins or HRAS (By
similarity). Has lysophospholipase activity.
-!- SUBCELLULAR LOCATION: Cytoplasmic (Probable).
-!- TISSUB SPECIFICITY: Ubjquitous; detected at low levels.
-!- SIMILARITY: Belongs to the AB hydrolase 2 family.
                                                                                                                                                                                                                                                                                                                                                                                                                    NUCLEOTIDE SEQUENCE [LARGE SCALE MRNA].

Roneration and initial analysis of more than 15,000 full-length human
and mouse cDNA sequences.",
Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).
I. FUNCTION: May hydrolyze fatty acids from Sacylated cysteine
residues in proteins such as trimeric G alpha proteins or HRAS.
I. SUMCLIUJAR LOCATION: Cytoplasmic (Probable).
Superiorations Colorior to the Ab hydrolase 2 family.
I. SIMILARITY: Belongs to the AB hydrolase 2 family.
I. CALTION: Ref. 3 sequence differs from that shown due to frameshifts
in positions 5, 164 and 179.
                                                                                                                                                                                                                                                                                                                                                                   This Swiss-Prot entry is copyright.
